DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Yong Choi on December 7, 2004.

The application has been amended as follows:

In claim 2, line 3, the first -- the-- is changed to --a-- .

Allowable Subject Matter

Claims 1-11 are allowed.

The best prior art of record particularly, Fangmeyer et al. (US 2001/0015142) teach the cup contour in the picked up video image is smoothed by a simulation with a spline function or a general polynomial function, and the geometric dimensions of the cup are determined on the basis of the smoothed cup contour. However Fangmeyer et al. does not teach the following claim limitations.

The primary reason for the allowance of claims is the inclusion of the method steps of a measurement data input step for inputting the measurement data along a measurement path; a selecting step for selecting a weighted spline filter formula in accordance with the type of the measurement data; an initializing step for applying

weight on the measurement data by a unit matrix to obtain an initial value of a spline filter output; a weight-adjusting step for adjusting and determining the weight on the measurement data; a spline filter output calculating step for calculating the spline filter output using the weight determined in the weight-adjusting step; a convergence test step for determining a convergence of the weight; and an output step for outputting a signal-processing result based on the spline filter Output, wherein, when the weight is not judged converged in the convergence test step, the weight is updated and the weight-adjusting step and the spline filter output calculating step are repeated to conduct a robust spline filtering on the measurement data. It is these steps found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.
